

How to read a Water Meter

Steps to properly read your meter:

1. Locate your meter box. In most cases, this will be a black box in the ground between you and your neighbor's home, close to the street.
2. Remove the lid and read the white dials ONLY. In the picture shown the meter reading is 10.

To calculate your water consumption subtract the last meter reading from the current meter reading.

Use your water meter to check for leaks:

1. Make sure no water is being used inside or outside your home.
2. Look at the triangular dial in the photo, this is a leak indicator. If this dial is turning, you may have a leak.
