

People flush all kinds of things down the toilet!

Some paper products and wipes are advertised as ‘flushable’ but aren’t.

Sure, they will flush down, but they won’t flus OUT. Wipes won’t decompose... they get caught up in wastewater treatment plant screens and filters—and that costs money to clear and repair!

Please take the pledge...NO WIPES IN THE PIPES

Please help protect water quality and our environment—and prevent costly water treatment plant repairs, as well!
